

# FortiGate-50 thru -100 Series

Remote/Branch Office  
Customer Premise Equipment  
Small-Medium Business

Datasheet

## Unified Threat Management Solutions

### Blended Security Threats Within The Enterprise

Network security violations can be devastating to businesses. Intellectual property, revenue, customer and company records, and other mission critical resources are at risk. As larger companies work to increasingly lock down their networks, more and more security threats are being targeted at smaller companies. Small office/home offices (SOHO) often lack the infrastructure to meet the technical sophistication of today's complex blended-attack methods and remote offices/branch offices (ROBO) often lack the on-site expertise to tackle such complex security issues. Point-based security appliances are inadequately equipped to protect against these types of attacks because of the multitude of attack vectors used. The Fortinet FortiGate series of SOHO and ROBO security appliances tightly integrate multi-threat protection onto a purpose-built platform to effectively block application- and network-borne attacks—attacks that, if successful, can result in lost productivity and lost revenue.

### Cost-Effective Security Platform

The Fortinet FortiGate series of security appliances deliver high performance, multi-threat protection at a compelling cost that is ideal for securing smaller locations. Complete Unified Threat Management (UTM) features including firewall, VPN, intrusion prevention, Web filtering, antispam, antivirus, antispyware, traffic shaping and IM/P2P controls prevent blended attacks or unauthorized use from interrupting business. All FortiGate devices support High Availability (HA) configurations to ensure maximum uptime. FortiGate appliances operate in either transparent or routing modes and are available with integrated multi-port switches and modems, all of which enable FortiGate devices to adapt to any network environment. Moreover, with Fortinet FortiGuard Security Subscription Services, the FortiGate-50 thru -100 Series become an affordable and easy-to-manage security solution for an enterprise's remote/branch offices, a service provider's customer premise equipment (CPE) or as an all-in-one solution for small-to-medium businesses.

### Key Solution Features and Benefits

<ul style="list-style-type: none"> <li>Industry proven, multi-threat security architecture for small/home offices and remote/branch offices</li> </ul>	Delivers powerful, integrated application security ideal for protecting against today's complex threats
<ul style="list-style-type: none"> <li>Extremely high price/performance ratio with unlimited number of users</li> </ul>	Low total cost of ownership, high performance via custom ASIC, and wide range of deployment options matches complex network security requirements
<ul style="list-style-type: none"> <li>Easy-to-deploy, easy-to-manage appliance form factor</li> </ul>	Allows for rapid deployment to quickly secure SOHO/ROBO office networks
<ul style="list-style-type: none"> <li>Modular software and hardware architecture</li> </ul>	Enables rapid support of new technologies, such as VoIP, IM, and P2P, to be secured without interruptions in service
<ul style="list-style-type: none"> <li>Strong centralized management and analysis with customized and detailed logging and reporting tools</li> </ul>	FortiAnalyzer and FortiManager offer extensive reporting, logging, and data archiving options for regulatory compliance, trending, or baselining

### The Fortinet Security Solution Suite

The Fortinet market-leading suite of security applications offer unparalleled protection from today's blended threats. Ultra high performance is achieved by combining custom ASICs with FortiOS, Fortinet's security-hardened operating system. Coupling these with FortiGuard security subscription services enables up-to-the-minute network protection against viruses, spyware, spam, inappropriate web content, and blended threats that propagate via commonly used applications like email, IM, P2P, web, and VoIP.

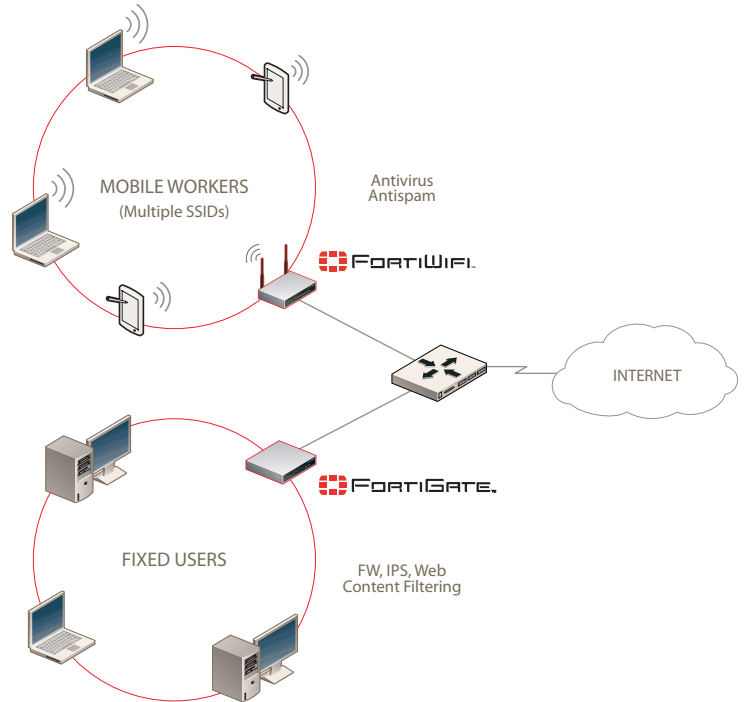

The complete line of Fortinet SOHO and ROBO solutions are designed to secure business networks.

### Next-Generation SOHO/ROBO Security

Antivirus + Antispam + Firewall + Intrusion Prevention System + Web Content Filtering

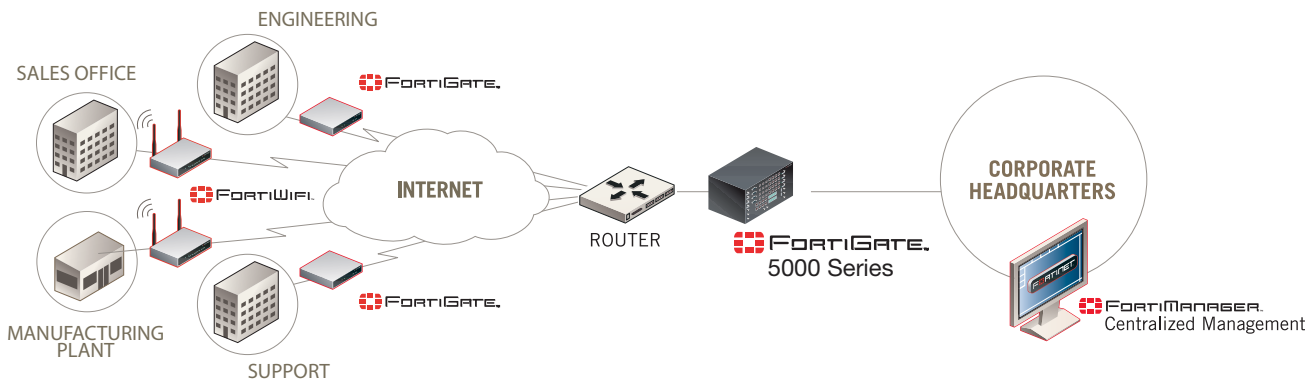

Through the integration of essential security technologies, Fortinet protects both mobile workers and workstations at SOHO and ROBO locations. The FortiWifi series offers the ability to broadcast multiple SSIDs (Service Set Identifiers), maximizing infrastructure flexibility in multi-provider environments and conserving spectrum. Moreover, different security policies can be set for each SSID, increasing security flexibility. To keep resources safe, Fortinet's advanced antivirus, antispyware, antispam, and intrusion prevention systems utilize a combination of signature and heuristic detection engines to provide multi-layered, real-time protection against a multitude of attacks before they can enter a network gateway. High performance is achieved and maintained through the use of the integrated FortiASIC processor.

### Enterprise ROBO Deployment

Firewall + VPN + Secure Messaging (Email, IM & P2P security)

Businesses now operate without extensive boundaries. Workers at various remote offices are tasked with vastly different business processes: some use messaging applications while others use database applications. Both are equally protected using Fortinet security solutions. Sales offices that use email and IM applications are protected from blended threats that use multiple methods to attack a system: viruses that spawn dormant Trojans, rootkits, and bots, for example. Combining Fortinet's antivirus and antispam technology with IM and P2P controls, employees are assured that email and IM messaging remain secure and won't result in lost revenue or lost data. Application and database users, such as a remote manufacturing site, are guaranteed secure connectivity—via firewalls and VPNs—to the application servers it uses at the central office. Finally, Fortinet offers a complete management solution for centralized monitoring, reporting, logging, and analysis to ensure that remote offices remain up and running.

### Managed Security Service Provider Customer Premise Equipment Deployment

Firewall + Intrusion Prevention + Antivirus + Web Content Filtering

Managed Security Service Providers (MSSPs) can distribute FortiGate appliances throughout their Customer Premise Equipment (CPE) deployments because of the wide array of connectivity options and the modular security architecture. Different customers can be protected in different ways, according to their needs. For example, one set of customers can be protected with a firewall and intrusion prevention system, while another can be protected with a firewall and web content filtering. MSSPs can centrally monitor and manage all customers using FortiManager and FortiAnalyzer for end-to-end reporting, logging, and even forensic analysis of security events.

## Fortinet Unified Security Solutions

- All-inclusive, cost-effective security solution  
Fortinet offers a lower total cost of ownership with the most complete set of functions including: antivirus, intrusion prevention, antispam, web content filtering, and antispam
- Automated updates of antivirus/antispyware and IPS security content  
Around-the-clock protection against the latest threats. Virus and intrusion encyclopedia covers more than 60,000 different threats
- High performance custom hardware  
The Fortinet FortiASIC delivers superior performance and reliability, ensuring that the security appliance does not become a network bottleneck
- Integrated multi-port switch  
Eliminates the need for external switches and provides enhanced connectivity options
- Secure Web UI for easy deployment and management  
Quick and easy configuration wizard walks administrators through initial setup and graphical user interface offers at-a-glance security event and performance monitoring
- Security hardened custom Operating System (OS)  
Underlying FortiOS is ICSA Labs-certified and offers a comprehensive command-line interface

## Technical Specifications

### HARDWARE SPECIFICATIONS

	FortiGate-50B	FortiWiFi-50B	FortiGate-60/60M	FortiWiFi-60A/60AM	FortiGate-60ADSL	FortiGate-100A
LAN Switching						
Interfaces	3	3	4	4	4	4
WAN Interfaces	2	2	2	2	2	2
DMZ Interfaces			1	1	1	2
Analog Modem			60M	60AM

**COMPLIANCE** ..... FCC Class A, Part 15, UL/CUL, C Tick, CE, VCCI

**AC POWER REQUIRED**—100-240 VAC, 50-60 Hz, 0.8 Amp (Max)

**CERTIFICATIONS** ..... ICSA Labs Certified: Firewall, Antivirus, IPS, IPSec VPN, SSL-VPN  
NSS Labs Approved (UTM)  
Common Criteria (EAL 4+)  
FIPS 140-2

**ENVIRONMENTAL**  
Operating temperature: 32 to 104 deg F (0 to 40 deg C)  
Storage temperature: -13 to 158 deg F (-25 to 70 deg C)  
Humidity: 5 to 95% non-condensing

### FortiGate – ASIC-Based Advantage

The FortiASIC family forms the foundation for the unique technology found in FortiGate platforms. FortiASIC Content Processors (CP) use an intelligent, proprietary content scanning engine that accelerates the compute-intensive actions which generally perform slowly on network processor chips. They also contain acceleration algorithms for encryption so that FortiGate security appliances can perform antivirus scanning on VPN tunnels ensuring clean and controlled communications. FortiASIC Network Processors (NP), found in select models, offer wire-speed firewall performance for the best possible performance.

### FortiOS – Developed for Security

FortiOS is developed by Fortinet solely for the purposes of security and network performance. FortiOS features full routing capabilities, including BGP/OSPF/RIP, complete logging and auditing for forensic analysis, granular Virtual Security Domain (VDM) support, and a complete command line interface. FortiOS is Common Criteria Certified EAL 4+.

### FortiGuard and FortiCare – Services for a Secured Future

The Fortinet FortiGate Unified Threat Management (UTM) solution includes all-in-one security appliances and optional FortiCare Support and FortiGuard Security Subscription Services. These service offerings include everything from technical support, hardware warranty and IPS/AV/Antispam/Web Filtering security content updates to ensure that your investment remains current and your company resources are always protected.
